

# Harshal Varade | Junior Frontend Developer

+919834681815    developer.ever@gmail.com    DeveloperHarshal92    Harshal Varade

## Summary

Results-oriented **Junior Frontend Developer**  
Expertise in **Reactjs, Nodejs, MongoDB, ExpressJs and JavaScript**.  
Known for problem-solving skills and driving growth.

## Education

**SMT.Kashibai Navle College of Engineering | BE** August 2022 to January 2026  
Electronics and Telecommunication | CGPA: 8.00 Pune, India

## Work Experience

**Mass IT Solutions Frontend Intern At** January 2025 to February 2025  
Pune, India  
Revitalized user interface resulting in 20% increase in website traffic and 15% rise in user engagement metrics as Frontend Intern at Mass IT Solutions.

## Skills

Frontend : Frontend Design , JavaScript , React JS  
Backend : Node JS , Mongo DB , API-REST , Express JS

## Projects

**Employee Management Sytem | [Website](#) | [Repository](#)** October 2025 to November 2025  
TaskFlow — Real-Time React task management app with Admin/Employee roles, Context API state sync, full task lifecycle, and responsive TailwindCSS UI.

**Restaurant Management System | [Website](#) | [Repository](#)** December 2025 to January 2026  
Created a comprehensive restaurant management web application using React and Vite that streamlines reservations, table assignments, menu management, staff scheduling, inventory tracking, and sales reporting to improve operational efficiency and customer service.

**DogStudio Website | [Website](#) | [Repository](#)** January 2026 to February 2026  
This project is a frontend clone of the Dogstudio website, created purely for learning and practice.  
The main goal was to understand how professional websites combine animations, layout flow, and **Three.js-powered 3D interactions** to create engaging experiences.  
Working on this project helped me improve my frontend skills and gain confidence in using Three.js for interactive web visuals.

## Awards

**Harshal Varade | [\(Link\)](#)** April 2024  
Secured First Prize in PBL Project Exhibition Competition "PRO-EX 2K24" held at Smt. Kashibai Navale College of Engineering on 5th April.  
My project was "Autonomous Maze Solving Robot" based on Arduino Nano and IR sensors.  
The bot was built in two parts, lower PCB for IR sensors and voltage regulation, while the upper part was for microcontroller and motor drivers.
